Shared sardinella Initiative

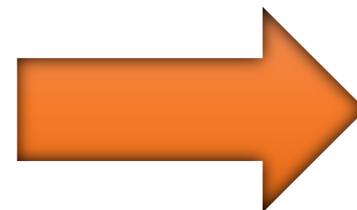

Ecosystem Approach to Fisheries (EAF)

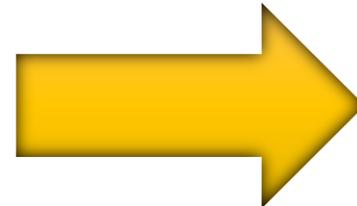

Addressing food and nutrition security can best be achieved through EAF, an integrated and holistic approach to fisheries management, addressing ecological, socio-economic and governance aspects of fisheries sustainability.

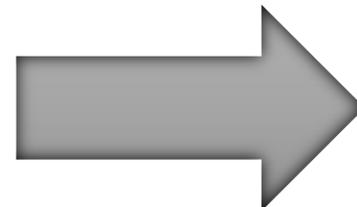

Lessons learned and possible solutions

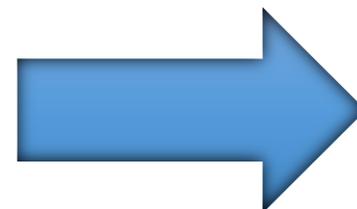

Information on **nutritional value** is often unknown.

Potential added value of combining **nutrition & food safety data** with knowledge on resources to obtain information on how nutritional requirements can be met.

Importance of **fisheries management** to ensure the **long-term availability of food** from the ocean and for optimizing nutritional benefits.

The EAF-Nansen Programme has demonstrated **the benefits** of an integrated and holistic approach
